FROM-RENNER KENNER

Listing of Claims:

- 1 1. (Canceled)
- 2. (Currently Amended) The movable barrier system of claim † 3, wherein the part of said elongate shield overlying said guide track is flexible.
- (Currently Amended) The movable barrier system of claim 1; A movable 1 3. barrier system comprising, a door jamb, a guide track rearwardly offset from 2 said door jamb to form an open space therebetween, a roller mounted door 3 movable along said guide track between a closed position and an open position, and an elongate shield attached to said door jamb laterally 5 outwardly of said guide track, wherein said elongate shield extends rearward 6 from said door jamb and overlies at least a portion of said guide track to cover 7 said open space and wherein said elongate shield includes a first leg extending 8 substantially parallel to said door jamb and a second leg extending rearwardly 9 from said first leg, and a tab extending inwardly from said second leg, wherein 10 said tab engages said guide track. 11
 - 1 4. (Previously Presented) The movable barrier system of claim 3, wherein said tab is flexible.
 - 1 5. (Previously Presented) The movable barrier system of claim 4, wherein said elongate shield is constructed entirely of metal.
 - 1 6. (Previously Presented) The movable barrier system of claim 4, wherein said
 2 first leg and said second leg are constructed of metal and said tab is
 3 constructed of plastic.

- (Previously Presented) The movable barrier system of claim 4, wherein said 1 7.
- elongate member is constructed entirely of plastic, said first leg and said 2
- second leg being a rigid plastic and said tab being a flexible plastic. 3
- (Previously Presented) The movable barrier system of claim 4 further 8. 1
- comprising, a second tab extending forward from the lateral outward 2
- extremity of said first leg. 3
- (Previously Presented) The movable barrier system of claim 4, wherein said ı 9.
- tab extends rearward as it extends inward from said second leg. 2
- 10. (Previously Presented) The movable barrier system of claim 9, wherein said 1
- tab has an increasingly reduced thickness as it extends outward from said 2
- second leg. 3
- 1 11. (Canceled)

11

- 12. (Previously Presented) A door system used in connection with an opening 1
- defined by a pair of jambs and a laterally extending header connecting the 2
- jambs, the door system comprising, a pair of tracks mountable on the 3
- jambs, said tracks having a vertical track section running adjacent the
- jambs, wherein a space is defined between said tracks and the jambs along 5
- at least a portion of their length, a door mounted for movement on said 6
- tracks and movable between an open position and a closed position, and a 7
- shield mounted laterally outward of said tracks and adjacent thereto, said 8
- shield extending rearward from the jamb and overlying at least a portion 9
- of said tracks along the length of said vertical track section, wherein said 10
- overlying portion of said shield contacts said vertical track section along said length thereof, and wherein said shield includes a first leg extending
- 12
- substantially parallel to and attached to the jamb and a second leg 13

- extending rearwardly from said first leg, said second leg being spaced laterally outward from said tracks and a tab extending inward from said
- 16 second leg and contacting said tracks.
 - 1 13. (Original) The door system of claim 12, wherein said tab is flexible.
 - 1 14. (Original) The door system of claim 13, wherein said tab is constructed of a nonmetallic material.
 - 1 15. (Original) The door system of claim 12 further comprising, a second tab
 - extending forward from said first leg, said second tab contacting the jamb
 - at a fulcrum, wherein said first leg is attached to the jamb at a point
 - 4 laterally inwardly of said second tab.
 - 16. (Previously Presented) The door system of claim 15, wherein said first leg
 - 2 is attached to the jamb by an adjustable fastener, whereby said first leg may
 - 3 be pivotally adjusted about said fulcrum to provide a variable pressure
- 4 contact of said tab against said vertical guide section.
- 1 17. (Previously Presented) The door system of claim 15 further comprising, a
- 2 mounting bracket attachable to the jamb and said track to support said
- 3 track on the jamb, said first leg of said shield extending laterally outwardly
- 4 beyond and enclosing said mounting bracket.
- 1 18. (Original) The door system of claim 17, wherein said mounting bracket is
- 2 L-shaped with said second rab, said first leg, said second leg and said rab
- 3 substantially enclosing said bracket.
- 1 19. (Original) The door system of claim 17, including a plurality of said
- 2 mounting brackets attaching said vertical track section to said jamb at

- different distances therefrom with said tab contacting the vertical track
- 4 section throughout the length thereof.
- 20. (Previously Presented) The door system of claim 12, wherein said shield is of uniform cross-sectional configuration along its length.
- 1 21. (Canceled)
- 1 22. (Canceled)
- 1 23. (Canceled)
- 1 24. (Canceled)
